ABSTRACT

TITLE:	Social Networking: A Buffer Against Death Anxiety
AUTHOR(S):	Cayatineto, Tracey L.
PRESENTED AT:	5th Annual Natural & Behavioral Sciences Undergraduate Research Symposium, Fort Lewis College

ABSTRACT: This study examined effects of mortality salience (MS) on social networking usage. Participants logged onto Facebook after writing about either death (MS) or dental pain. MS increased Facebook usage in terms of sites visited and future use predictions, showing that social networking functions as a buffer against death anxiety.
